C.Function:
A.Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C.Superfamily: superoxide dismutase [Cu-Zn]
C.Keywords: copper; metalloprotein; oxidoreductase; zinc
F;18,27,36,39/Binding site: zinc (His, His, His, Asp) #status predicted

C.Function:
A.Description: catalyzes the dismutation of 2 molecules of peroxide rac
A.Description: catalyzes the dismutase [Cu-Zn]
C.Keywords: copper; metalloprotein; oxidoreductase; zinc
F.1-22/Domain: signal sequence #status predicted <SIG>
F.22-199/Product: superoxide dismutase [Cu-Zn] #status predicted <MAT>
F.92, 94,117,173/Binding site: copper (His) #status predicted
F.99-195/Disulfide bonds: #status predicted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..,rucession: B41654
A;Status: preliminary
A;Status: preliminary
A;Status: preliminary
A;Residue: type: DNA
A;Residues: 1-187 < KRO>
C;Function:
A;Description: catalyzes the dismutation of 2 molecules of perroria-
C;Superfamily: Superoxide dismutase [Cu-Zn]
C;Keywords: copper; metallonrorial
A;Title: Copper-zinc superoxide dismutase of Haemophilus influenzae and Haemophilus para
A;Reference number: A41654; MUID:92041655; PMID:1938942
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C;Species: Haemophilus parainfluenzae

C, Comment: This protein is an extracellular form.
C, Function:
A, Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen & C, Superfamily: superoxide dismutase [Cu-Zn]
C, Superfamily: superoxide dismutase [Cu-Zn]
C, Keywords: copper; glycoprotein; metalloprotein; matalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metalloprotein; metallopr

C. Comment: This protein is a membrane-bound form.
C. Function:
A. Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C. Function:
A. Description: catalyzes the dismutation of 2 molecules of peroxide radical to dioxygen
C. Superfamily: superoxide dismutase (Cu-Zn)
C. Superfamily: superoxide dismutase (Cu-Zn)

J. Bacteriol. 184:4601-4611(2002).
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      MEDLINE=2217963; PubMed=1242430; Deng W., Burland V., Plunkett G.                                                     SUBUNIT: Homodimer (By similarity).
SUBCELLULAR LOCATION: Periplasmic (By similarity).
SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;

Submitted (DEC-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).
-!- COPACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By

J. Mol. Biol. 302:465-478(2000).
J. Mol. Biol. 302:465-478(2000).
J. FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
J. CAPALYIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
J. COFACTOR: Binds I copper ion and 1 zinc ion per subunit.
SUBCELLULAR LOCATION: Periplasmic.
J. SUBCELLANEOUS: Encoded by a cryptic bacteriophage.
J. MISCELLANEOUS: Encoded by a cryptic bacteriophage.
J. SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!-FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).
-!-CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).
-!-COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By similarity).
-!-SINILARITY: Belongs to the Cu-Zn superoxide dismutase family.

"Unique structural features of the monomeric Cu,Zn superoxide
dismutesse from Escherichia coli, revealed by X-ray crystallography.";

J. Mol. Biol. 274.400-420(1997).

-I- FUNCTION: Destroys radicals which are normally produced within the
cells and which are toxic to biological systems. This enzyme is
highly thermostable.

-I- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = O(2) + H(2)O(2).

-I- COAGCTOR: Binds 1 copper ion and 1 zinc ion per subunit.

J. Mol. 1810. 285:283-296(1999).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.

-!- CATALYTIC ACTIVITY: 2 supercoxide + 2 H(+) = 0(2) + H(2)0(2).

-!- COFACTOR: Binds 1 copper ion and 1 zinc ion per subunit.

-!- SUBUNIT: Homodimer.

-!- SUBCELLULAR LOCATION: Periplasmic.

-!- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                             SEQUENCE OF 23-173.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@lsb-sib.ch).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Kroll J.S., Langford P.R., Loynds B.M.;
"Copper-zinc superoxide dismutase of Haemophilus influenzae and H.
parainfluenzae.";
J. Bacteriol. 173:7449-7457(1991).
-!- FUNCTION: This protein lacks enzymatic activity (probably because of the presence of a tyrosine instead of a histidine at residue
   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     similarity).
--- SUBUNIT: Homodimer.
--- SUBUSILIULAR LOCATION: Periplasmic (Potential).
--- SIMILARITY: Belongs to the Cu-Zn superoxide dismutase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Superoxide dismutase [Cu-Zn] like.

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems.
-!- FUNCTION: May confer survival advantage by accelerating dismutation of superoxide of environmental origin to hydrogen peroxide, disruptive to the normal mucociliary clearance process
                                                                                                                                                                                                     STRAIN=1391;

of uropathogenic Escherichia coli.";

Proc. Natl. Acad. Sci. U.S.A. 99:17020-17024(2002).

-!- FUNCTION: Destroys radicals which are normally produced within the cells and which are toxic to biological systems (By similarity).

-!- CATALYTIC ACTIVITY: 2 superoxide + 2 H(+) = 0(2) + H(2)0(2).

-!- COPACTOR: Binds 1 copper ion and 1 zinc ion per subunit (By
